

TASK 01: AGENCY AUTOMATION HUNT

Biswas IT Firm — Research Report & Working Prototype

This report identifies ten repetitive agency workflows and proposes practical automation options. Time values are planning estimates and should be validated with actual agency time logs.

1. Problem List and Time Estimates

Problem	Current workflow	Automation proposal	Manual	Auto	Saved
Client onboarding	Collect details from messages; create folders and welcome message	Form → CRM → folder template → AI requirement summary	25m	10m	15m
Lead management	Copy leads into sheet; assess priority; write replies	Capture → scoring → priority → follow-up draft	15m	4m	11m
Social scheduling	Prepare and schedule posts individually	Content calendar + reusable templates + scheduler	45m/5	15m/5	30m
Client reporting	Collect metrics; calculate; create charts; email PDF	Connected dashboard + scheduled AI summary	90m	20m	70m
Content repurposing	Rewrite one article for multiple platforms	AI channel variants + human approval	60m	15m	45m
Design requests	Clarify request; create brief and task manually	Structured form → task → AI brief	20m	5m	15m
Video asset prep	Download, rename, organize and create notes	Automated folders + naming + transcription	40m	10m	30m
SEO audit	Inspect pages and manually record issues	Crawler + rules + AI explanation	60m	20m	40m
Intern management	Assign tasks and send reminders manually	Task board + automated reminders/digest	35m/day	8m/day	27m
Meeting notes	Write notes, identify actions and send recap	Transcription → summary → tasks	45m	10m	35m

Estimates are illustrative assumptions, not measured Biswas IT Firm production data. A one-to-two-week time study should be used before final procurement.

2. Selected Working Prototype

Solution: Lead Intake + Lead Scoring + Follow-up Automation. The workflow is frequent, measurable and can be demonstrated without paid infrastructure.

Flow: Lead form → validation → scoring → Hot/Warm/Cold classification → personalized follow-up draft → dashboard update → browser persistence.

The prototype uses deterministic rules so it works offline without an API key. In production, an LLM can improve intent extraction and drafting, but a human should approve outbound messages.

3. Tools and Cost

Free or free-tier foundations: Google Forms/Sheets, HubSpot CRM free tools, Trello, Looker Studio, Lighthouse, open-source FFmpeg/Whisper, and the included offline prototype. Paid tiers may be needed for higher usage, advanced workflow features, hosted AI, premium connectors, or team permissions.

Automation platforms such as Make and Zapier have free plans with usage limits; Buffer has a free plan with channel and scheduling limits. Vendor pricing and limits should be checked again before purchase.

4. Estimated Impact

Across the stated example units, the workflows represent roughly 303 minutes of manual work versus 102 minutes after automation, or approximately 201 minutes (3.35 hours) saved. This is a planning estimate, not a measured result.

5. Future Improvements

- CRM and webhook integration
- LLM requirement extraction and message drafting
- Human approval before email or WhatsApp sending
- SLA alerts and escalation for hot leads
- Duplicate detection, audit logs and permissions
- Measured ROI dashboard using actual agency time logs
